Seat Valves

Series SVH04

- **Actuators are shut-off with virtually zero-leakage, even over a longer period of time**
- **Particularly suitable for mobile machines, thanks to the low-weight design and small dimensions**
- **Can be used as independent valve blocks, or can be at-tached to the L.8S series of proportional directional valves**
- **With suitable upstream control valves, all actuators con-nected to the blocks can be proportionally operated**
- **Additional auxiliary functions can be implemented**

1 Description

Series SVH04 low-weight (aluminium) valve blocks feature seat valves and are used to control single or double acting cylinders. They are applied where extremely low levels of leakage are required. The design is based on a direct acting, solenoidoperated 2/2 seat valve that seals in both directions. The valves close the flow path to or from hydraulic actuators with virtually zero leakage.

Where double-acting actuators are to be controlled, the circuit must include a 3-position directional valve situated before the seat valves. In its mid-position, this valve must connect the service ports to tank.

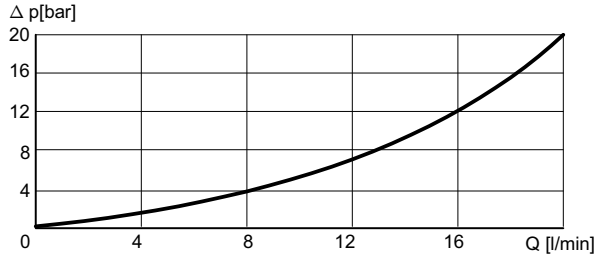
The SVH04 seat valves are available as:

- Self-contained monoblocks, with add-on sections
- Monoblocks for attaching to the L.8S series of proportional directional valves
- Intermediate and end sections for assembling customer-specific valve blocks

1.1 Technical data

General characteristics	Description, value, unit
Nominal flow rate	20 l/min
Operating pressure	max. 250 bar
Oil temperature	-20 °C ... +80 °C
Viscosity range	10 ... 300 mm^2/s
Recommended filtration	NAS 1638 class 9
Nominal voltages	12 or 24 ± 10% Volt DC
Power consumption	27 Watt
Duty cycle	100 %
Enclosure protection	IP65, DIN 40050

1.2 Performance graphs



Values apply to one seat-valve cartridge in the energised position, for both flow directions. Measured with oil viscosity 35 mm^2/s

DC 24 Volt	=	24

Variants / special features (inserted by the factory)

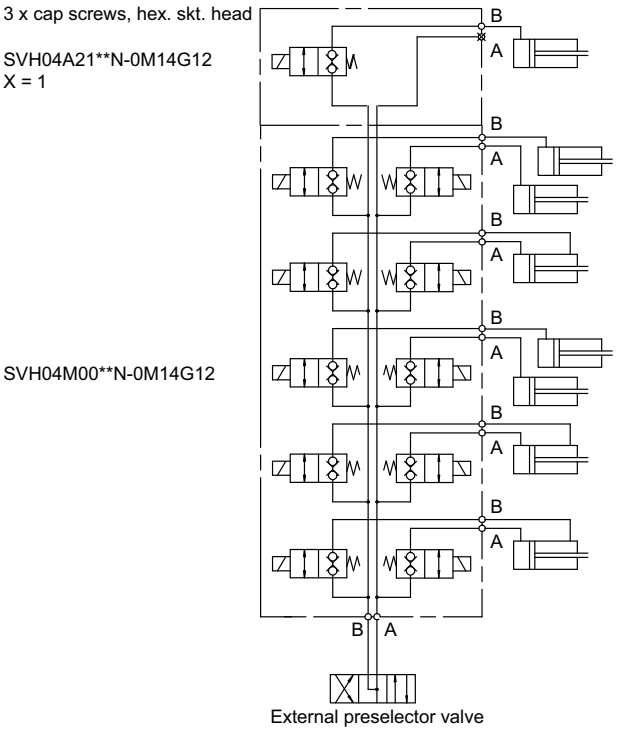
5) Please specify the required pressure setting in bar.

6) Empty stations in blocks (see 4.6).
Unless otherwise stated, the stations beginning from the highest number will be left empty.

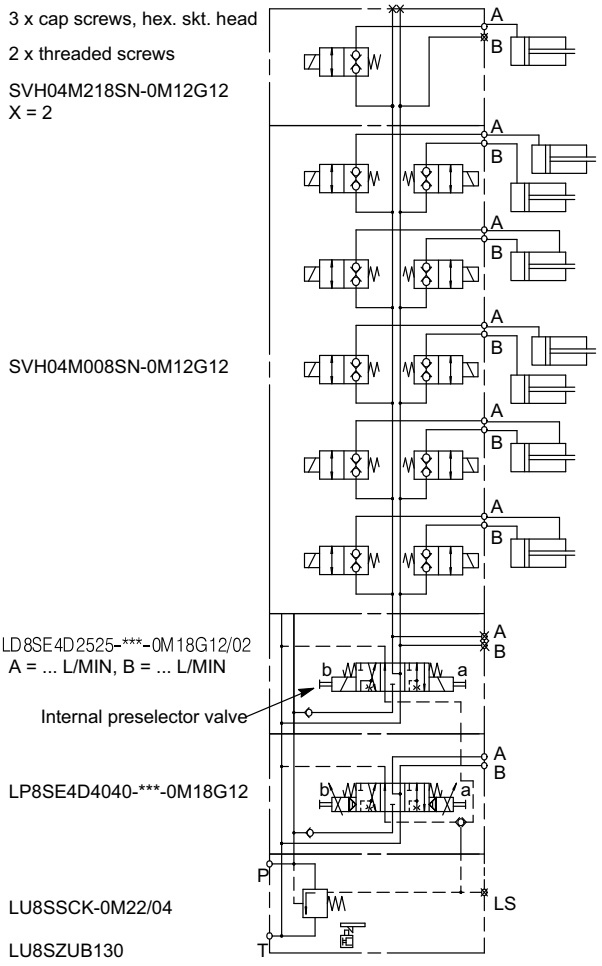
For the end of the block: 2 pcs. threaded plug with profiled sealing ring, M8x1, ordering-no.: 100224628

5 Application examples

5.1 Monoblock



5.2 Monoblock attached to a series L.8S valve



Specific functional features:

- Actuator ports A and B are shut-off with virtually zero leakage.
- Double-acting cylinders are controlled in both directions by energising the seat valves A and B and using the preselector valve to determine the direction.
- Single-acting cylinders are controlled in both directions by energising the seat valve and, to extend the cylinder, operating the preselector valve.
- A float function is obtained by energising seat valves A and B.
